- Javascript CERTIFICATE

ABOUT ME

My analytical and critical thinking skills, as well as my customer focus and problem solving abilities, which are necessary to produce creative and innovative solutions, are key attributes for my career.

◆ I value teamwork, collaboration and a results-oriented approach. I adapt to the rapidly changing software industry by keeping my skills up to date and refreshing them as needed."

◆ I value collaborating with design teams and taking a proactive approach to achieve efficient results. I closely follow design and development processes to improve the user experience and work open to feedback.

◆ In this period when technology is changing rapidly, it is very important for me to follow new trends and developments. Constantly updating myself makes me a successful front-end developer. Every challenge presents a new opportunity and for me it is a mental challenge and an opportunity for continuous learning. Creating and implementing creative solutions motivates and encourages me to solve the challenges I face in every project.

◆ In my opinion, a good web design should look reliable at first glance. It should meet the user's expectations and still offer one or two small surprises or innovations. User-friendly sites are of course a must.

EXPERIENCE

FULL STACK DEVELOPER

KENMEDİA DİGİTAL AGENTOUR - September 2024 -- Hannover Germany
